According to our (Global Info Research) latest study, the global High Aluminosilicate Glass market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes. High Aluminosilicate Glass is ultra-high pressure resistant glass, which is made of aluminosilicate glass with a purity of 99.5%. The ultra-high pressure resistant glass produced in various specifications not only has the characteristics of high pressure resistance, but also has the characteristics of high temperature resistance. It belongs to the non-alkali aluminosilicate Salt glass series, the product has good permeability, which is convenient for human observation. The glass has a high softening point temperature, which is suitable for high and low temperature workplaces. It can also be tempered and heat treated like ordinary glass to increase the compressive capacity of the outer surface of the glass.
