## Abstracts

High-availability servers are groups of systems that support the server applications that can be reliably utilized with a minimum amount of downtime. These servers are operated using high-availability software to harness the redundant computers that provide continued service when the server components fail. Without high-availability software, if a server is running a particular application and crashes, the application is unavailable until the server is restored or fixed.

### Scope of the Report:

This report studies the High-Availability Server market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the High-Availability Server market by product type and applications/end industries.

The growing demand for big-data analytics to be one of the primary growth factors for the high-availability server market. Business applications and consumer applications generate a huge quantity of structured and unstructured data that require high-performance storage facilities. Big data analytics analyzes the business data and aids in business decision making. The increasing requirements for big data analytics solutions and complex data storage facilities influence the demand for high-availability servers.

Enterprises are adopting the cloud-based services to improve their business operations. Increasing use of analytics has led to several innovations such as highly efficient high-availability servers including mission-critical and density-optimized servers. The increasing demand for converged and hyper-converged infrastructures is increasing the

competition among the server system vendors that has resulted in the reduction in the price of their products. This decline in the price of servers is one of the major trends that will gain traction in the high-availability server market during the coming years.

The global High-Availability Server market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
