Abstracts

The most important element of barrier packaging, which can include barrier bags, barrier films, barrier labels, and more, is that it prevents contaminants from getting through. This is particularly important for edible goods, which can be quickly ruined by exterior factors. This report mainly focuses on high barrier resin materials for food packaging market.

According to our (Global Info Research) latest study, the global High Barrier Resin Materials for Food Packaging market size was valued at US\$ 1102 million in 2023 and is forecast to a readjusted size of USD 1529 million by 2030 with a CAGR of 5.2% during review period.

Food packaging materials are required to have high barrier properties, which can effectively prevent oxygen, water vapor, insect pests, microorganisms and acid-base corrosion liquids from entering the packaging through the packaging wall, and prevent food from deteriorating due to interference from external factors; It can effectively prevent the leakage of organic vapor in food and keep the internal conditions of food packaging continuously stable, so as to achieve the effect of protecting food, maintaining the freshness of food and prolonging the service life of food. Plastic packaging materials are widely used in food packaging due to their good barrier properties, freshness preservation, and antibacterial properties. The market concentration of barrier resins is relatively high, which is mainly caused by the production scale of upstream raw materials of barrier resins and related production technologies.
