The global High-base Alkyl Calcium Salicylate market size is expected to reach \$ 95.73 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

High-base Alkyl Calcium Salicylate is a highly effective lubricating oil additive (such as T109C/T109D), primarily composed of alkyl salicylic acid, calcium salt, and calcium carbonate. It possesses excellent high-temperature detergency, strong acid neutralization capabilities, and antioxidant properties. Being sulfur-free, it is commonly used in high-grade internal combustion engine oils and marine cylinder oils, extending equipment lifespan.

High-base Alkyl Calcium Salicylate is a multifunctional additive for internal combustion engine oils, combining cleaning, dispersing, antioxidant, and anticorrosive properties. It belongs to the category of high-end metal detergents. The main raw materials include long-chain alkylphenols (obtained through the alkylation of phenol with long-chain olefins), carbon dioxide, calcium oxide, and solvents such as methanol.

Global sales in 2025 are projected to be approximately 23,000 tons, with an average market price of approximately US\$3,010 per ton. The industry's gross profit margin is in the range of 15%–30%.
