High borosilicate glass plane mirror is a plane mirror made of high borosilicate glass material. High borosilicate glass is a kind of silicate glass with high boron content, which has excellent characteristics such as low thermal expansion coefficient, high thermal shock resistance and high chemical resistance, so it is widely used in optics, electronics, chemistry and other fields. High borosilicate glass plane mirrors have excellent optical properties and can be used in optical applications such as reflection, refraction, beam splitting, and parallel beams. Its surface is polished and coated with high precision, which can achieve high reflectivity, low scattering rate, low absorption rate and other properties, thus ensuring the high efficiency and high quality of the optical system. High borosilicate glass plane mirrors are widely used in lasers, optical instruments, semiconductor manufacturing, solar cells and other fields. For example, the use of borosilicate glass plane mirrors in lasers can realize beam reflection and beam splitting, thereby controlling the transmission direction and power distribution of laser beams; Realize functions such as optical imaging and measurement.
