Abstracts

The global High Build Sealer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The term 'high build' in this context refers to the ability of the sealer to build up to a thicker layer on the surface compared to regular sealers. This increased film thickness helps to fill in minor surface imperfections, such as small cracks, pores, or unevenness, resulting in a more uniform and visually appealing surface.

High build sealers are commonly used in applications where surface preparation and appearance are important. They are often applied to porous surfaces such as concrete, masonry, wood, or certain types of substrates, where they can penetrate and form a protective layer. The thick film formed by the high build sealer helps to enhance the substrate's resistance to moisture, staining, chemicals, and wear.

The advantages of using a high build sealer include:

Enhanced Surface Protection: The thick film provides increased protection against water intrusion, UV radiation, staining, and chemical damage, thereby extending the lifespan of the substrate.

Improved Surface Appearance: High build sealers help to create a smoother and more uniform surface by filling in minor imperfections, resulting in a more visually pleasing finish.

Subsequent Coating Compatibility: The leveled and sealed surface provided by a high build sealer serves as a suitable base for the application of additional coatings, such as

paints, stains, or topcoats, ensuring better adhesion and improved performance of the subsequent layers.

Reduced Porosity: The high build sealer effectively reduces the porosity of the substrate, preventing excessive moisture absorption and potential damage caused by freeze-thaw cycles.

A high build sealer is a type of coating or sealer that is specifically formulated to create a thick and substantial film on a surface when applied. It is designed to seal and protect the substrate while also providing a smooth and level base for subsequent coatings or finishes.
