Abstracts

An internal combustion engine uses propane gas or natural gas to produce electrical energy that is converted from mechanical energy with the help of generator assembly. Such a generator is called as a gas generator. Generators are used to generate electrical energy from mechanical energy. The sources for mechanical energy could differ from a reciprocating steam engine to an internal combustion engine (ICE) to a compressed air to hand crank. An ICE can typically use various types of fuels such as gasoline, diesel propane gas, or natural gas to produce mechanical energy, which in turn is converted into electrical energy with the help of generator assembly.

Scope of the Report:

This report focuses on the High Capacity Gas Generator in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The increasing frequency of power grid failures has raised the adoption numbers of gas powered generators globally. Developing countries are urbanizing rapidly due to the rising population levels and increase in industrial development which raises the overall power consumption. The increased power consumption has resulted in high pressure on old components with lower capacity in existing power grids leading to overload. This leads to power grid failures giving rise to blackouts and power outages. To counter such issues, industrial consumers are increasingly using gas generators for continuous power supply.

The emergence of remote monitoring systems in power generators is one of the key

trends that will contribute to the market growth in the forthcoming years. HMS Industrial Networks, a Swedish company pioneering in industrial communication, has introduced Netbiter which is a remote management solution for power generators. It is equipped with features such as monitoring health and readiness of the generators, alarm management, and generator fleet management for overall large-scale fleet supervision which is to be used for rental services.

The worldwide market for High Capacity Gas Generator is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
