Abstracts

The global High-carbon Ferro Manganese market size is expected to reach \$ 1166.2 million by 2029, rising at a market growth of 2.0% CAGR during the forecast period (2023-2029).

Ferromanganese, a ferroalloy with high content of manganese, is made by heating a mixture of the oxides MnO_2 and Fe_2O_3 , with carbon, usually as coal and coke, in either a blast furnace or an electric arc furnace-type system, called a submerged arc furnace. The oxides undergo carbothermal reduction in the furnaces, producing the ferromanganese. Ferromanganese is used as a deoxidizer for steel. High-carbon ferromanganese (HC FeMn) is a manganese alloy, smelted directly from manganese ores. Its manganese content ranges from 70-80 wt% and its carbon content from 2-8 wt%.

This report studies the global High-carbon Ferro Manganese production, demand, key manufacturers, and key regions.
