According to our (Global Info Research) latest study, the global High Carbon Steel Shot market size was valued at US\$ 1417 million in 2024 and is forecast to a readjusted size of USD 2254 million by 2031 with a CAGR of 5.4% during review period.

High Carbon Steel Shots are metallic-type abrasive media that are highly efficient in preparing, cleaning, and finishing surfaces during industrial processes. With a carbon content ranging from 0.85% to 1.20%, primarily comprised of iron, it is the hardest and densest. This makes it perfect for blasting. The production begins by melting steel scrap and then atomizing it into round particles after that heat treatment is done on them so that they can attain the necessary hardness. With a diameter size of between 0.3mm and 2.5mm, the high carbon steel shot abrasive can be used for various blasting operations. Some of the major applications include descaling, de-rusting, deburring as well as shot peening by a shot blasting machine.
