High Chromium Cold Work Die Steel is a tool steel category designed for cold forming, blanking, stamping, and cutting applications that require high wear resistance, compressive strength, and dimensional stability. Owing to its elevated chromium content, this material offers improved hardenability and surface durability, making it suitable for molds and tooling operating under repeated mechanical stress and abrasive conditions in industrial processing environments.

The industrial chain of High Chromium Cold Work Die Steel includes upstream iron ore, ferroalloys, chromium additives, scrap steel, melting consumables, and heat treatment media. Midstream covers steelmaking, refining, ingot or billet casting, forging, rolling, annealing, quenching, tempering, and machining. Downstream applications mainly include stamping dies, cold extrusion tools, blanking molds, cutting tools, industrial parts processing, and mold maintenance services.
