## Abstracts

According to our (Global Info Research) latest study, the global High-Cis Methyl dihydrojasmonate market size was valued at US\$ 120 million in 2025 and is forecast to a readjusted size of US\$ 164 million by 2032 with a CAGR of 4.7% during review period.

High-cis dihydrojasmonic acid methyl ester is a colorless to pale yellow liquid fragrance. Due to its high proportion of cis isomers, its aroma intensity is far superior to that of ordinary hedione. It possesses an elegant jasmine, lemon, and delicate powdery notes. By overcoming the 'dilution effect' of ordinary hedione, this ingredient is frequently used in high-end fragrances, providing a light, airy, strong, and long-lasting scent.

The upstream mainly relies on basic chemical raw materials. The core synthetic route starts with cyclopentanone and n-pentanal, prepared via a Michael addition reaction. The midstream is the core of this industrial chain, with extremely high technological barriers, mainly in chiral stereoselective catalysis and isomerization control. The downstream connects to the high-end fragrance and premium daily chemical markets.

Global sales in 2025 were approximately 1800 tons, with an average selling price of \$65/kg. The industry's gross profit margin is around 25%-35%.
