Abstracts

The global High Copper Solder market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

High-copper solder is a copper-based solder whose main component is copper and also contains small amounts of other elements, such as zinc, tin, nickel, etc. High copper brazing filler metal is usually brazed in reducing atmosphere, inert atmosphere or vacuum, and can braze low carbon steel, low carbon alloy steel, tungsten, molybdenum, iron and nickel alloys, etc. The melting point of high-copper solder is around 1070~1080°C, and the gap filling gap is between 0~0.07mm. The advantages of high-copper solder are high strength, high toughness, high conductivity and corrosion resistance. The disadvantages are higher price and higher requirements on the brazing process.

This report studies the global High Copper Solder production, demand, key manufacturers, and key regions.
