## Abstracts

The global High-definition Analog Camera market size is expected to reach \$ 4167 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

In 2025, global sales of high-definition analog cameras reached 12.5 million units, with an average selling price of US\$220. High-definition analog cameras are analog video acquisition devices with CCD or CMOS image sensors as their core. They convert image signals into analog video output through high-resolution optical lenses and are characterized by high image clarity, fast response speed, and strong anti-interference ability. They are widely used in traffic monitoring, building security, industrial inspection, and public safety. Its upstream raw materials mainly include optical lenses, high-precision sensors, electronic chips, PCB boards, housings, and metal structural components. On average, each device consumes 0.08 kg of sensors, 0.15 kg of optical lenses, 0.25 kg of electronic components, and 0.5 kg of structural components. Downstream, it mainly supplies security system integrators and government or enterprise monitoring projects, with building security accounting for 40%, traffic monitoring for 30%, and industrial and other applications for 30%. The global total production capacity is approximately 18 million units per year, and the industry's average gross profit margin is approximately 28%-38%. In terms of downstream consumption, new monitoring system installations account for 60%, and equipment upgrades and maintenance account for 40%. The future direction lies in upgrading to high-definition + intelligent analysis, edge computing, and compatible network transmission. With the continuous increase in public safety investment, the advancement of smart city construction, and the development of industrial automation, the market demand for high-definition analog cameras remains stable, and there are business opportunities for upgrading towards higher resolution, intelligence, and

integration.
