Abstracts

According to our (Global Info Research) latest study, the global High-Density Interconnect (HDI) Printed Circuit Board market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Traditional printed circuit boards (PCBs) often face limitations in miniaturization. However, HDI technology overcomes these limitations by employing multiple layers of fine lines and vias, allowing for complex and dense designs. HDI PCBs feature thinner lines, closer spaces, and denser wiring, allowing for faster connections while reducing project size and volume. This means that, in a world where consumers and industries demand smaller and smaller electronic devices, HDI PCBs are critical to meeting these requirements.
