## Abstracts

The global High Density Inverter(HDI) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The features of high density inverters include: high-density wiring, powerful power tubes, heat dissipation and cooling design, and comprehensive reliability design. The design of the high density inverter has five characteristics: the board contains micro-guide hole design such as blind holes, the hole diameter is below 152.4um and the annular ring is below 254um, the solder joint density is greater than 50cm/cm<sup>2</sup>, the wiring density is greater than 46 cm/cm<sup>2</sup>, The width and distance of the lines do not exceed 76.2um, and the high density is mainly reflected in three aspects: holes, lines, and interlayer thickness.

The high density inverter is a circuit board designed for high power applications. It has a high-density interconnect structure and the strong power transmission capability to meet the needs of high-power equipments.
