Abstracts

The global High Density Rack Servers market size is expected to reach \$ 14500 million by 2029, rising at a market growth of 9.9% CAGR during the forecast period (2023-2029).

The so-called high-density cabinet means that the cabinet configuration density is higher, the cabinet can accommodate more IT equipment, and can carry greater computing power and storage capacity. , cable layout and other aspects have put forward higher requirements.

For the data center, by increasing the area of the unit computer room and the computing power and storage capacity of the unit cabinet, the data center can actually play a greater role and allow the data center to have greater output capacity. For example, high-density cabinets emit more heat and consume more power. At this time, there are special requirements for air-conditioning heat dissipation, power transmission power, and UPS power supply protection, which must be fully considered in the design of the computer room.
