The global High-efficiency Oil-water Separating Agent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The appearance of high-efficiency oil-water separator is colorless to light yellow liquid, the specific gravity is about 1.02g/cm³, and the decomposition temperature is 150°. Soluble in water, good stability. This product is cationic, high molecular weight, and has electric neutralization and strong adsorption bridging effect, so it is suitable for oil-water separation of oil-water mixture in oil production. High-efficiency oil-water separation agent is suitable for sewage or fine particles containing anionic chemical substances or negatively charged particles. Wastewater, whether used alone or in combination with physical and mechanical coagulants, can achieve the purpose of fast and effective separation or purification of water. The high-efficiency oil-water separation agent has synergistic effect, can speed up the flocculation speed and reduce the cost of using the product.
