According to our (Global Info Research) latest study, the global High Efficiency Tank Heat Exchanger market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The high-efficiency tank heat exchanger is a shell-and-tube heat exchanger made of high-efficiency coils. It has the advantages of high heat exchange efficiency, small size, and high safety in use. The shell material is made of carbon steel, and the heat exchange inner tube is made of copper and nickel. Copper and copper inner tubes are used in fresh water and cooling tower water, and nickel-copper inner tubes are used in surface water, sea water, and salt water. Products of other metal materials can also be provided as required. It is widely used in heat pump air conditioners, industrial chillers and heat pump water heaters with water as the heat exchange medium.
