The global High Efficiency Tank Heat Exchanger market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The high-efficiency tank heat exchanger is a shell-and-tube heat exchanger made of high-efficiency coils. It has the advantages of high heat exchange efficiency, small size, and high safety in use. The shell material is made of carbon steel, and the heat exchange inner tube is made of copper and nickel. Copper and copper inner tubes are used in fresh water and cooling tower water, and nickel-copper inner tubes are used in surface water, sea water, and salt water. Products of other metal materials can also be provided as required. It is widely used in heat pump air conditioners, industrial chillers and heat pump water heaters with water as the heat exchange medium.
