High ductility double-sided smooth lithium battery copper foil is a copper foil material designed for lithium batteries with excellent ductility and smooth surface. It has the following characteristics: It has excellent ductility and flexibility, and can withstand large deformations during the production process without breaking or producing defects. This property makes it easier to process and handle during the manufacturing process. Both sides of the copper foil are smoothed, and the surface is smooth and uniform, which helps to improve the conductivity of the battery and reduce the resistance inside the battery. High ductility double-sided smooth copper foil is designed to provide better processability and electrical performance, suitable for a variety of application scenarios that require high-performance lithium batteries.
