The global High End Gateway Electricity Meter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The high-end gateway meter is an advanced meter designed to measure and monitor energy consumption in real time. These instruments are typically used in industrial, commercial, and large residential environments and provide highly detailed information about energy usage patterns. In addition to basic energy measurement functions, high-end gateway meters are often equipped with advanced functions such as data recording, remote monitoring, and communication functions. They can also be connected to other devices in the building's energy management system, enabling more effective monitoring and control of energy use. Some high-end gateway meters are also designed as 'smart' meters, which means they can communicate with utility companies, provide real-time information about energy consumption, and help achieve grid load balancing.
