Abstracts

The global High Flex Cordsets market size is expected to reach \$ 855 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

In 2025, global high flex cordset production reached approximately 4762 k units, the average price is 120 usd/unit.

High Flex Cordsets are factory-terminated cable assemblies designed to maintain electrical continuity, signal integrity, mechanical reliability, and environmental sealing under repetitive bending, continuous linear travel, robotic torsion, or combined dynamic motion. The product typically consists of fine-stranded copper conductors or optical fibers, insulation, fillers, tensile elements, shielding, an abrasion-resistant PVC, PUR, TPE, or TPU jacket, industrial connectors, contacts, seals, coupling hardware, overmolded strain relief, and application-specific identification. Common configurations include single-ended cordsets, double-ended cordsets, extension cables, adapter cables, pigtails, branching assemblies, and hybrid power-data assemblies using M8, M12, RJ45, servo, encoder, vision-system, or customized interfaces. High Flex Cordsets are primarily used in industrial robots, cable carriers, linear actuators, machine tools, machine vision, factory automation, semiconductor and battery equipment, automated warehousing, packaging machinery, and other continuously moving industrial systems.
