High-flex industrial robot cables are specialized cables designed to meet the demanding requirements of industrial robots, especially in terms of flexibility and durability. Industrial robots often have complex and repetitive motion patterns. The cables need to have excellent flexibility to withstand the continuous bending, twisting, and stretching during the robot's operation. For example, in the joints of a robotic arm, the cable must be able to follow the movement of the joint without breaking or losing its signal - transmission and power - supply functions. These cables can usually withstand a large number of bending cycles, sometimes up to millions of times, ensuring reliable operation over a long period.
