Abstracts

Professional bulk special gas system (BSGS) is a highly technical distribution system that is specifically designed for automatic safe distribution of large quantity of gases. Energy purification valve controller allows operator to use the touch screen easily for the control of machine more conveniently. The graphic interface allows the operator to quickly decide how to operate the machine by browsing the screen. The buttons on the panel and menus on the screen gives the operator the peace in mind to control the screen.

BSGS is designed to distribute gases to one or two bulk supply distribution systems, such as large cylinders, Y-type cylinders or receiver trailer. The system is provided with 2 types of pressure regulators installed for high-volume or ultra-high volume applications like extra-large heater and resource and environment control. The system is designed to ensure the most stable supply records and the best industrial operations. The system program is designed to improve efficiency and prolong the service life of tools.
