Abstracts

The high flow humidification therapeutic instrument mainly includes four parts: air oxygen mixing module, heating and humidification module, connecting pipe and nasal catheter. The air oxygen mixing device mixes air and oxygen in front of the fan according to the preset oxygen concentration, and the fan accelerates to produce high-speed airflow after mixing; After heating and humidifying the high-speed airflow, the heating and humidifying module transmits the gas to the patient in the way of constant temperature, constant humidity and constant flow rate through connecting pipes and nasal catheters, playing the role of respiratory support.
