According to our (Global Info Research) latest study, the global High Frequency Cutting Knife market size was valued at US\$ 1008 million in 2025 and is forecast to a readjusted size of US\$ 1594 million by 2032 with a CAGR of 6.7% during review period.

In 2025, global High Frequency Cutting Knife production reached approximately 4.45 million units, with an average global market price of around US\$220 per unit.

The gross profit margin of major companies in the industry is between 45%-68%.

In 2025, the global production capacity of High Frequency Cutting Knife was approximately 5.94 million units.

High Frequency Cutting Knife is a medical or endoscopic electrosurgical cutting instrument that uses high-frequency electrical energy to cut, dissect, or coagulate soft tissue with controlled thermal effect. It is widely used in minimally invasive surgery, endoscopy, gastrointestinal procedures, urology, gynecology, and general surgical treatment requiring precise cutting and hemostasis.

The industrial chain of High Frequency Cutting Knife covers upstream components such as stainless steel tubes, electrodes, insulation materials, handles, wires, connectors, ceramic parts, packaging materials, and sterilization consumables. The midstream consists of precision machining, electrode assembly, insulation processing, functional testing, sterilization, quality inspection, and packaging. Downstream applications mainly include hospitals, endoscopy centers, surgical departments, ambulatory surgery centers, and medical consumable distributors.

Minimally invasive surgery development and clinical precision operation requirements boost the application of high frequency cutting knives. It realizes rapid cutting and hemostasis with small trauma, effectively shortening operation time. Safety control optimization and diversified specifications meet the needs of different surgical departments.
