## Abstracts

According to our (Global Info Research) latest study, the global High-frequency Electrocardiogram market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

High-Frequency Electrocardiogram (HF-ECG) is an advanced electrocardiogram technology that detects heart disease by analyzing the high-frequency components in the electrocardiogram signal. Compared with the traditional electrocardiogram (ECG) that mainly analyzes low-frequency components (such as 0.05-100 Hz), high-frequency ECG focuses on signals in a higher frequency range (usually 150-250 Hz). This technology can provide more detailed information about the heart's electrical activity, thereby facilitating early detection and diagnosis of heart abnormalities.
