High frequency microwave absorbing powder is a special material powder that can effectively absorb and attenuate high-frequency microwave energy. It is usually made of magnetic or conductive materials (such as ferrite, carbon nanotubes, conductive polymers, etc.). These powders have unique electromagnetic properties and can effectively absorb electromagnetic wave energy in high-frequency bands (such as microwaves and millimeter waves) to reduce reflection and interference. Therefore, they are widely used in electromagnetic shielding, radar stealth, wireless communications, radio frequency equipment, microwave heating and other fields. The application of high-frequency microwave absorbing powder helps to improve the performance of equipment, reduce signal interference, and effectively reduce electromagnetic pollution.
