According to our (Global Info Research) latest study, the global High Frequency Noise Simulator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

High frequency noise simulator is an EMC tester that reproduces high-frequency noise with a fast rise time when a switch, etc. is turned ON/OFF. Since the pulse rise time is under 1ns and contains noise with a wide bandwidth, it is very suitable for reproducing malfunctions. By reproducing the line noise entering the power supply line and the induction noise entering the communication line, it is possible to evaluate the performance of electronic product malfunctions and malfunctions.

The Global Info Research report includes an overview of the development of the High Frequency Noise Simulator industry chain, the market status of Communication Equipment (
