## Abstracts

The global High Frequency Noise Simulator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High frequency noise simulator is an EMC tester that reproduces high-frequency noise with a fast rise time when a switch, etc. is turned ON/OFF. Since the pulse rise time is under 1ns and contains noise with a wide bandwidth, it is very suitable for reproducing malfunctions. By reproducing the line noise entering the power supply line and the induction noise entering the communication line, it is possible to evaluate the performance of electronic product malfunctions and malfunctions.
