High frequency straight seam welded pipe machine is a commonly used metal welding equipment, mainly used for welding pipes with smaller diameters, such as straight seam welded pipes commonly used in oil, natural gas, hydraulic and other fields. It uses high-frequency current heating and pressure welding to weld two pipes together, forming a long pipe. The high-frequency straight seam welded pipe machine is suitable for welding pipes with diameters ranging from 8mm to 660mm. For pipes with smaller diameters, smaller electrode heads and molds can be used to achieve welding by adjusting parameters; For pipes with larger diameters, larger electrode heads and molds are required, and higher currents and pressures need to be adjusted to achieve welding. The advantages of high-frequency straight seam welding pipe machine are fast welding speed, good weld quality, high efficiency, and it is suitable for welding various metal materials. It is widely used in industries such as construction, petroleum, natural gas, and hydropower to manufacture various types of pipelines and pipes.
