According to our (Global Info Research) latest study, the global High Frequency Switching Rectifiers market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The high-frequency switching rectifier is a rectifying device, which is a high-frequency switching power supply device that converts alternating current (AC) into direct current (DC), and supplies the load after filtering. Its small size and high efficiency make it easy to expand, move and install. Because high-frequency switching rectifiers have the advantages of small size, light weight, high conversion efficiency, stable output and easy adjustment, communication equipment has generally adopted high-frequency switching rectifiers as their power supply and conversion devices.
