The global High Frequency Switching Rectifiers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The high-frequency switching rectifier is a rectifying device, which is a high-frequency switching power supply device that converts alternating current (AC) into direct current (DC), and supplies the load after filtering. Its small size and high efficiency make it easy to expand, move and install. Because high-frequency switching rectifiers have the advantages of small size, light weight, high conversion efficiency, stable output and easy adjustment, communication equipment has generally adopted high-frequency switching rectifiers as their power supply and conversion devices.
