There are many types of cables, such as optical fiber cables, transmission cables, equipment cables, etc. Transmission cables include transmission wires and power cables.

Low voltage and high voltage are relative concepts. Common voltage levels are 220V, 380V, 1kV, 10kV, 350kV, 110kV, 220kV, 500kV, etc. Generally speaking, 220V and 380V are considered low voltage, mainly for household electricity; 35kV and above are considered high voltage, mainly for power transmission. The uses of cables of different voltage levels are very different. High-voltage cables are mainly used to transmit electricity, while low-voltage cables are suitable for industrial manufacturing, such as wind power. In addition, there are also great differences in the insulation layer. The insulation layer of low-voltage cables is generally within 3mm, and the insulation layer of high-voltage cables is generally above 5mm.
