Abstracts

The global High-Moisture Extruded Plant Protein Texturates market size is expected to reach \$ 519 million by 2032, rising at a market growth of 8.7% CAGR during the forecast period (2026-2032).

In 2025, the global sales volume of high-moisture extruded plant protein texturates reached 103,000 metric tons, with an average price of approximately US\$2,800 per metric ton.

Produced from plant protein sources such as soy, peas, fava beans, and wheat, these texturates are food ingredients formed into fibrous, chunk, or flake structures through high-moisture twin-screw extrusion and cooling-solidification processes. They are typically used to replicate the texture of muscle fibers found in meat and to enhance chewiness. Upstream inputs primarily include plant protein isolates/concentrates, starches, and flavoring systems, while downstream applications mainly target plant-based meat products, ready-to-eat/cook meals, restaurant chains, frozen foods, and snack foods.

This report studies the global High-Moisture Extruded Plant Protein Texturates production, demand, key manufacturers, and key regions.
