The global High Moisture Extrusion Cooling Dies and Texturizing Dies market size is expected to reach \$ 435 million by 2032, rising at a market growth of 8.2% CAGR during the forecast period (2026-2032).

High Moisture Extrusion Cooling Dies and Texturizing Dies refers to a specialized tooling used for the production of plant-based meat and alternative proteins. This die assembly is mounted at the discharge end of co-rotating twin-screw extruders and consists of a transition section and a cooling-forming section. In 2025, global high moisture extrusion cooling dies and texturizing dies production reached approximately 16,230 unit, with an average global market price of around USD 15,000 per unit. A factory gross profit of USD 5,250 per unit with 35% gross margin. A single line full machine capacity production is around 120 unit per line per year. The upstream is dependent on steel and carbide. The downstream demand is concentrated in food manufacturer and plant protein manufactures. A food manufacturer uses a twin-screw extruder with a water-cooled texturizing die to process plant based chicken breast for foodservice products. India growth driven by massive government support for food tech, shifting dietary habits, and a strong drive by early-stage entrepreneurs to scale plant-based meat production.
