The global High Molybdenum Content Aluminum-Molybdenum Alloy market size is expected to reach \$ 445 million by 2032, rising at a market growth of 10.9% CAGR during the forecast period (2026-2032).

High-molybdenum aluminum-molybdenum alloys are a special type of alloy with a high molybdenum content, typically exceeding 60%, significantly higher than common aluminum-molybdenum alloys. This high molybdenum content endows the alloy with superior high-temperature resistance, corrosion resistance, and oxidation resistance, while retaining the lightweight properties of aluminum. This alloy is widely used in aerospace, nuclear industry, and the manufacture of high-performance equipment, capable of withstanding high-strength and high-temperature operation requirements in extreme environments, making it crucial for engineering applications demanding high strength and durability. Sales are projected at approximately 2,930 tons in 2025.
