Abstracts

According to our (Global Info Research) latest study, the global High and Low Voltage Prefabricated Substation market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The high and low voltage prefabricated substation is a quick-installed complete set of power distribution equipment that combines high-voltage switchgear, transformers, low-voltage distribution equipment, power factor compensation devices, electricity metering devices and other substation equipment into one.

In recent years, the load density of low-voltage power supply has continued to increase, placing high demands on the reliability and quality of power supply. In this case, if a large-capacity substation is used as the center to supply power to surrounding users at low voltage, a large amount of non-ferrous metals will be consumed, the power loss will be large, and the quality of power supply cannot be guaranteed. Guaranteed. On the other hand, if high voltage is applied to the load center and a substation is built in the load center, the low-voltage power supply radius can be shortened, the power supply quality can be improved, non-ferrous metals can be saved, and power loss can be reduced.
