Abstracts

According to our (Global Info Research) latest study, the global High-Nickel Pig Iron market size was valued at US\$ 2737 million in 2025 and is forecast to a readjusted size of US\$ 3798 million by 2032 with a CAGR of 4.7% during review period.

In 2025, global high-nickel pig iron production reached 1.94 million tons, with an average selling price of US\$1371 per ton. High-nickel pig iron has a nickel content of 8%-15%, making it a high-nickel grade NPI. It is a low-cost, high-impurity iron-nickel alloy, mainly used to replace some refined nickel as a raw material for stainless steel smelting. The core downstream application of high-nickel pig iron is in stainless steel smelting, where it is melted in an induction furnace and then added to an AOD furnace for rough refining. High-nickel pig iron first enters the stainless steel market, and then its application in end-use sectors such as construction, automotive, and mechanical engineering. The upstream of the industry chain is centered on the mining and supply of laterite nickel ore, with major mining resources concentrated in Indonesia and the Philippines; the midstream is the smelting of high-nickel pig iron, with the RKEF process being the dominant technology; the downstream mainly serves stainless steel smelting companies. Gross profit margin ranges from approximately 15% to 35%.
