In terms of product type, Horizontal Bead Mill is the largest segment, occupied for a share of about 80%, and in terms of application, Chemical Industry has a share about 36 percent.

High-performance bead mill is a type of equipment used in the pharmaceutical, biotechnology, and chemical industries for grinding and dispersing particles. It operates by forcing a suspension of solid particles through a narrow gap between two beads or disks, which agitate and break up the particles into smaller sizes. The smaller particle size achieved by the bead mill allows for better dispersion and increased surface area, resulting in improved product quality and performance. High performance bead mills provide higher throughput, better energy efficiency and higher quality in almost any application than traditional bead mills.
