KVM switches are hardware devices that allow IT personnel to use a single keyboard, video monitor, and mouse (KVM) to control more than one computer at a time.

High Performance KVM switches possess high density, high resolutions, high ports numbers and multi users on operation at the same time, and widely applied in large multinational corporations or large organizations. Not every KVM with 32 ports and above is high end. It could not only provide with multiple ports but is highly reliable or lets you access computers over a huge distance. For broadcast application, video throughput, high resolution and no latency is critical. Many renowned institutions across vertical sectors, including Broadcast, Post Production, Banking, Healthcare, Maritime, Air Traffic Control and Government rely on high class KVM solutions. This report studies the High Performance KVM market. In general, high end devices are high price products and more a nice market.

Increasing Data Center Complexity: Data centers are becoming more complex with the proliferation of servers, networking equipment, and storage systems. High-performance KVM switches allow IT administrators to manage multiple servers and devices from a centralized console, improving efficiency and reducing clutter.

Server Consolidation: Many organizations are implementing server consolidation
