According to our (Global Info Research) latest study, the global High Performance Polymerization Inhibitor market size was valued at US\$ 165 million in 2024 and is forecast to a readjusted size of USD 227 million by 2031 with a CAGR of 4.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Polymerization inhibitors are reagents which are used to prevent undesirable polymerization by light or heat. Conventional polymerization inhibitors, such as hydroquinone, are at a disadvantage because they cannot prevent polymerization under certain conditions. By contrast, high-performance polymerization inhibitors show a strong polymerization inhibiting effect when purifying or storing highly reactive monomers regardless of conditions.
