Abstracts

High-performance polypropylene composite is a composite material made from polypropylene resin mixed with other additives or reinforcements. Such composite materials often have excellent properties such as high strength, wear resistance, corrosion resistance and high temperature resistance. They can be widely used in aerospace, automotive, construction and other fields to manufacture parts, structural parts, pipes and other products. During the preparation process of high-performance polypropylene composite materials, reinforcing materials, such as glass fiber, carbon fiber, ceramics, etc., are often added to improve the strength and hardness of the material. In addition, fillers, stabilizers, lubricants, etc. can also be added to improve the processing performance and durability of the material.
