According to our (Global Info Research) latest study, the global High-Performance Steel-Based Self-Lubricating Bearings market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

High-performance steel-based self-lubricating bearing is a bearing with excellent performance. It uses high-performance steel as the base material and is coated with a layer of self-lubricating material on the surface to achieve self-lubrication and long service life of the bearing. Self-lubricating materials are usually composite materials composed of one or more solid lubricants and one or more polymer materials, which have good wear resistance, corrosion resistance and fatigue resistance. High-performance steel-based self-lubricating bearings can not only operate stably under harsh working conditions such as high temperature, high speed, and high load, but can also reduce the number of bearing maintenance and replacements and reduce equipment maintenance costs.
