Abstracts

High Power Thermoelectric Modules are designated as having a Q_{cmax} greater than 100 watts. High Power Thermoelectric Modules are used when large amounts of heat pumping are required.

High Power Thermoelectric Modules are designed to maximize heat pumping capacity. The high density loading factor in these TEMs enables very high cooling capacities and efficiencies to be achieved in standard footprint sizes. The high cooling density enables high performing heat exchangers to be produced in smaller, more efficient sizes.

According to our (Global Info Research) latest study, the global High Power Thermoelectric Modules (TEM) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
