## Abstracts

According to our (Global Info Research) latest study, the global High Precision Electrohydrodynamic Jet Printing System market size was valued at US\$ 153 million in 2025 and is forecast to a readjusted size of US\$ 333 million by 2032 with a CAGR of 11.9% during review period.

Electrohydrodynamic jet printing (EHDJET), also known as Electrostatic jet printing (ESJET), or super inkjet (SIJ), is an emerging new technology for printing very high resolution, high aspect ratio structures. Here, droplets or continuous jets are ejected by applied electric fields instead of mechanical actuation. Exposure to an electric field causes mobile ions in a polarizable liquid to accumulate at the liquid surface. The coulombic repulsion of the ions causes the meniscus at the nozzle end to deform into a conical shape, called a Taylor cone. When the electric field exceeds a critical limit, the stress from the surface charge repulsion at the cone apex exceeds the surface tension and a droplet of fluid is emitted towards the grounded substrate, achieving pattern printing. The high-precision electrohydrodynamic inkjet printing system studied in this report refers to an electrohydrodynamic inkjet printing system with a positioning accuracy of less than or equal to 3 microns and a repeat positioning accuracy of less than or equal to 1 micron, mainly desktop (vertical) type.

Electrohydrodynamic jet technology is an emerging technology that has higher resolution and accuracy than traditional piezo inkjet printing technology. As more and more manufacturers make breakthroughs in this technology, many new players will enter the market in the future, bringing more intense competition. With the advancement of technology, the accuracy and printing efficiency of EHD jet printing system will be further improved. EHD jet printing system is mainly used in semiconductor packaging,

display, printed electronics and other industries. Its downstream market is large and growing rapidly. Besides, the downstream market's demand for high-resolution printing also drives the growth of the EHD jet printing system market.
