According to our (Global Info Research) latest study, the global High-Precision GNSS Positioning Services market size was valued at US\$ 1741 million in 2025 and is forecast to a readjusted size of US\$ 3258 million by 2032 with a CAGR of 9.5% during review period.

High-precision GNSS positioning service is a service that uses the Global Navigation Satellite System (GNSS) to provide users with centimeter-level or even millimeter-level high-precision location information through a series of technical means and processing methods. GNSS includes satellite navigation systems such as the United States' GPS, China's BeiDou (BDS), Russia's GLONASS, and Europe's Galileo. The service receives satellite signals, processes and calculates the signals, eliminates or weakens the influence of various error sources (such as satellite orbit errors, clock errors, ionospheric delays, tropospheric delays, etc.), and obtains high-precision positioning results.
