The global High-Precision GNSS Positioning Services market size is expected to reach \$ 3258 million by 2032, rising at a market growth of 9.5% CAGR during the forecast period (2026-2032).

High-precision GNSS positioning service is a service that uses the Global Navigation Satellite System (GNSS) to provide users with centimeter-level or even millimeter-level high-precision location information through a series of technical means and processing methods. GNSS includes satellite navigation systems such as the United States' GPS, China's BeiDou (BDS), Russia's GLONASS, and Europe's Galileo. The service receives satellite signals, processes and calculates the signals, eliminates or weakens the influence of various error sources (such as satellite orbit errors, clock errors, ionospheric delays, tropospheric delays, etc.), and obtains high-precision positioning results.
