The global High Precision Induction Synchronizer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

High-precision induction synchronizer is a device based on induction principle, which is used to realize high-precision position control and synchronization control. It includes components such as sensors, controllers and actuators. The sensor is responsible for monitoring the position or motion state of the object in real time. The controller receives the sensor feedback signal and compares and calculates it with the preset target position or time, and finally generates a control signal to drive the actuator to achieve position or time synchronization.
