According to our (Global Info Research) latest study, the global High Precision Servo Motor Brake market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Servo motor brake, also known as holding brake, is a component of power-on release. Generally, after selecting the servo motor with brake, it is integrated with the motor. Generally, DC24V power supply is used for action. It is mainly used to lock the servo motor rotor shaft after power failure. It is generally used on the vertical servo shaft to prevent sudden power failure. The vertical load will drive the motor to rotate and slide due to gravity, thus causing danger. This report mainly studies high-precision servo motor brake. It has the characteristics of fast braking time, accurate positioning, compact structure and low running noise. It is mainly used in robot, manipulator, CNC machine tool, automatic production line, precision engraving machine and other automatic control fields with high accuracy requirements.
